

Gemstone Birds ~ Jumbo Size ~

We are pleased to offer an exclusive line of extra large “Jumbo” Gemstone Birds. It goes without saying, these are a very rare and special item.

Only the finest stones are used for the bird’s body; free from fracture lines or other inclusions that could cause it to shatter when being carved. The beauty of the stones combined with the artistic detail in form and texture make these a true treasure.

These Jumbo birds are set on large grade-A pieces of amethyst (from geodes), providing a stunning “perch” for these majestic creatures.

Jumbo birds are available in a variety of stones including golden calcite (yellow), serpentine (mottled green), rose quartz (pink), blue calcite. Special orders can be arranged.

(These pieces range from 20-35 lbs., including base. Lighter in photos to indicate relative size of these very large Gemstone Birds.)

Serpentine

Blue Calcite

Golden Calcite

Rose Quartz
